Vancouver, BC | [Portfolio](#) | [LinkedIn](#) | shahaadit2016@gmail.com

Full-Stack Development | BSc Computer Science & Statistics | UBC Science Co-op Student

EDUCATION

University of British Columbia

Vancouver, BC

BSc, Combined Major in Computer Science and Statistics, Science Scholar

Sept. 2024 – May 2029 (Expected)

- Relevant Coursework: CPSC 210 Software Construction (A+)

CORE SKILLS

TypeScript, React, Next.js, Pixi.js, Python, Django, PostgreSQL, REST APIs, AWS S3, Express.js, Node.js, Tailwind CSS, Git/GitHub (PRs, Code Reviews)

EXPERIENCE

Software Developer | [Link To Live Site](#)

May 2026 – Present

Collaborative Digital Heritage Studio (CoDHerS), UBC

Vancouver, BC (Hybrid - Remote)

- Built 20+ interactive levels for an educational Uyghur-language typing game, converting static Canva mockups into playable scenes in Pixi.js and TypeScript.
- Evaluated Firebase against a custom backend by building a documented mock-backend proof of concept; recommended against Firebase, finalizing a Django/PostgreSQL architecture now running 9 production tables.
- Wrote automated test suites for REST endpoints, integrated S3 object storage for dynamic asset delivery, and built an admin portal with full CRUD over all 9 tables that pushes content changes live into the game.
- Led a 2-developer team and served as sole point of contact across the 3-person design and 3-person language teams during the manager's absence, keeping cross-functional delivery on schedule.
- Authored and presented weekly progress reports to non-technical faculty and language-community stakeholders, translating technical trade-offs and roadmap into plain-language recommendations they could act on.

Meter Data Management Intern

June 2025 – July 2025

Abjaya Technologies

Remote

- Validated incoming industrial time-series datasets against client-specified format requirements and structural constraints, rejecting or flagging records that failed to meet defined schemas before downstream processing.
- Built Python pipelines to clean and interpolate malformed records, ensuring output datasets conformed to expected structure and were reliable for reporting.

PROJECTS

InsightUBC Fullstack Web App

Jan 2026 - Apr 2026

- Built a React frontend that integrates with multiple REST API endpoints to support querying, filtering, and modifying structured course and section records, with each UI workflow mapped to a specific endpoint contract.
- Implemented a ZIP file upload flow in React that submits files to a dedicated REST endpoint, which validates the archive's format and internal file structure before triggering asynchronous data processing.
- Built the Express.js backend with test-driven development, writing a comprehensive automated test suite covering all endpoints, input validation, and edge cases prior to implementation.
