

Aadit Shah

Vancouver, BC (open to relocate) | 306-250-9063 | shahaadit2016@gmail.com | [LinkedIn](#)

Software Development | Data Analysis | BSc Computer Science & Statistics Student

EDUCATION

University of British Columbia

Vancouver, BC

BSc, Combined Major in Computer Science and Statistics, Science Scholar

Sept. 2024 – May 2029 (Expected)

CORE SKILLS

TypeScript, React, RESTful API Design, Node.js, Python, Matplotlib, scikit-learn, PyTorch, Test Driven Development

EXPERIENCE

Meter Data Management Intern

June 2025 – July 2025

Abjayon Technologies

Remote

- Implemented structured data quality checks and client-specified anomaly detection logic on industrial electric meter time-series datasets to identify false-zero readings, spikes, and over-reporting meters in regulated utility datasets.
- Developed SQL-based ETL workflows in OracleDB to validate time-series data into analysis-ready tables.
- Built Python pipelines using pandas and NumPy to validate, clean, and interpolate data for downstream analytics and reporting.

PROJECTS

InsightUBC Fullstack Web-App | *TypeScript, React, Express.js, REST APIs*

Ongoing

- Designed and implemented a TypeScript REST API over current and historical UBC course-offering data, supporting complex temporal and multi-field queries for analysis and reporting
- Built the backend using Express.js with test-driven development, developing an exhaustive automated test suite covering all API endpoints, type-specific validation and edge cases
- Developed a React frontend consuming the API to provide full CRUD workflows for adding, filtering, and modifying course-offering records

UBC Email Summarizer | *JavaScript, LLM APIs, Gmail API, Google Cloud Console*

June 2025

- Built a web tool that calls GPT-based LLM APIs to automatically summarize long Gmail threads for busy inboxes.
- Implemented a pipeline to fetch, clean, and structure Gmail messages into prompts, send them to the LLM API, and display the returned summaries.
- Integrated securely with the Gmail API using OAuth 2.0 and deployed the end-to-end workflow on Google Cloud with logging and basic monitoring.

MNIST Binary Classifier | *Python, NumPy, pandas, Matplotlib, seaborn*

March – April 2025

- Built and evaluated a binary classifier using radial basis interpolation to distinguish between two MNIST digit classes.
- Applied k-fold cross validation and hyperparameter tuning to assess model stability and generalization performance.
- Used Matplotlib and seaborn to visualize input distributions, classification boundaries, and misclassification trends to support error analysis and model interpretation.

Snooker Scorekeeping App | *Java, Swing, JSON*

March – April 2025

- Designed and implemented a Java Swing application to manage scoring for multiple concurrent snooker games with live UI updates and isolated game state
- Implemented JSON-based persistence to serialize and restore in-progress matches, enabling save/load functionality across sessions
- Applied object-oriented design patterns (Observer, Singleton, Composite) to structure game logic and UI interactions for modularity and maintainability

Tidal Height Linear Regression Model | *Python, PyTorch, scikit-learn*

February 2025

- Built a supervised linear regression model in Python to predict tidal height changes at Steveston Harbor from historical measurement data.

- Preprocessed and cleaned 30,000+ noisy time-series records to create modeling-ready feature matrices for regression.
- Used PyTorch tensors to wrangle multidimensional data and scikit-learn's **LinearRegression** for model training and coefficient analysis.
- Investigated overfitting on noisy regression data by comparing training vs. validation performance and adjusting the feature set.
- Applied core feature engineering techniques (aggregations, rolling statistics, lag features) to extract meaningful signals from raw tidal height measurements.

LEADERSHIP & COMMUNITY

Sponsored Rotary Youth Representative

August 2023 – November 2023

Rotary Club of Saskatoon-Riverside

Clear Lake, MB

- Sponsored by the Rotary Club of Saskatoon-Riverside to collaborate with youth leaders across Canada in a policy discussion forum.
- Worked in cross-regional teams to develop and refine proposals addressing community and social impact challenges.
- Prepared detailed post-event documentation and summaries to communicate outcomes and recommendations to sponsors.
- Managed interprovincial travel coordination and scheduling independently.

YMCA Community Action Network Volunteer

July 2022 – November 2022

YMCA of Saskatoon

Saskatoon, SK

- Co-organized a homelessness awareness initiative, coordinating event logistics, schedules, and outreach with YMCA staff.
- Represented the project in an interview on Global News Saskatoon, strengthening public visibility.
- Documented project plans, meeting notes, and task lists to track progress on the campaign
- Contacted and coordinated prospective facilitators and speakers via email and phone, clearly communicating event goals, expectations, and timelines.
