Aadit Shah

Vancouver, BC | (306) 250-9063 | shahaadit2016@gmail.com | github.com/ash160606 | Portfolio

TECHNICAL SKILLS

Languages: TypeScript, Python, Java
Frameworks & Libraries: React, Django, PixiJS, Next.js, TanStack, pandas, NumPy
Tools & Platforms: Git, Docker, PostgreSQL, Cloudflare R2
Concepts: Web Development, REST APIs, Object-Oriented Programming, Unit Testing, Data Structures

EXPERIENCE

Software Developer Co-op | University of British Columbia | Github **May 2026 – Present**

- Building an educational web game to provide a digital platform for minoritized language learners and archivists
- Enabled CDN edge caching by switching from presigned Cloudflare R2 links to public buckets to reduce game asset load times by 60%
- Modified the PixiJS engine to switch from background asset loading to lazy imports and cleanup to cut memory usage from 1.05 GB to 380 MB
- Ported the TypeScript web app to iOS with Capacitor.js, building and signing without a Mac via xtool on WSL, to prepare App Store and Play Store releases
- Presented the app to professors from Harvard, Kansas University, and George Washington University for pedagogical insights and implemented features to support new requirements

Meter Data Management Intern | Remote Internship | Abjayon Technologies **June 2025 – July 2025**

- Wrote python scripts to validate, format, and flag smart electric meter usage data for a government provider
- Identified malfunctioning live electric meters by parsing hourly and weekly consumption reports to identify dead / double reporting meters
- Flagged data beyond client-specified thresholds for meter-outage and double-reporting detection and reported them through a Jakarta Messaging (JMS) queue
- Interpolated over false or missing points to recover usage data and keep invoices up to date

PROJECTS

InsightUBC | TypeScript, React, Express.js, Node **April 2026**

- Built a website to store, query, and display historical UBC course offering data
- Delivered sub-second responses on complex filtered queries over 2,000+ courses by adding pagination to the course endpoint, limiting payload size while supporting nested conditional filters
- Displayed courses with intuitive navigation and a responsive UI on a React frontend
- Followed a test-driven approach by writing black-box unit tests for any new feature before implementing it to ensure implementations are up to spec

EDUCATION

University of British Columbia | Bachelor of Science, Computer Science + Statistics **3rd Year | Class of May 2029**
Vancouver, BC *UBC Science Co-op Program*

Relevant Coursework: CPSC 210 Software Construction (A+), CPSC 221 Basic Algorithms and Data Structures (A+)
